Comput. Methods Appl. Mech. Engrg. 122 (1995) 395–398

Computer methods in applied mechanics and engineering

Subject index of Volume 122

Boundary element methods
Unit-impulse response matrix of unbounded medium by infinitesimal finite-element cell method, J.P. Wolf and C. Song 251–272

Calculus of variations
A mathematical framework for finite strain elastoplastic consolidation. Part 1: Balance laws, variational formulation, and linearization, R.I. Borja and E. Alarcón 145–171

Coupled problems
Unit-impulse response matrix of unbounded medium by infinitesimal finite-element cell method, J.P. Wolf and C. Song 251–272

Dynamics
Alternative integration methods for problems in structural dynamics, B. Owren and H.H. Simonsen 1– 10
Unit-impulse response matrix of unbounded medium by infinitesimal finite-element cell method, J.P. Wolf and C. Song 251–272
Variational principles, FE and MPT for analysis of nonlinear impact–contact problems, Q.H. Qin and X.Q. He 205–222

Elasticity
A computational method for design senstivity analysis of elastoplastic structures, T.H. Lee and J.S. Arora 27– 50
A mathematical framework for finite strain elastoplastic consolidation. Part 1: Balance laws, variational formulation, and linearization, R.I. Borja and E. Alarcón 145–171
Dual analysis with general boundary conditions, J.F. Debongnie, H.G. Zhong and P. Beckers 183–192
Hybrid-Trefftz finite element method for Reissner plates on an elastic foundation, W.H. Qin 379–392

Finite difference methods
CFD predictions of lobed mixer performance, P. Koutmos and J.J. McGuirk 131–144
Use of a spreadsheet program in a two-dimensional heat conduction problem, A. Kharab 173–181

Finite element and matrix methods
A modified generalized midpoint rule for the integration of rate-dependent thermo-elastic-plastic constitutive equations, P.A. Fotiu 105–129

Dual analysis with general boundary conditions, J.F. Debongnie, H.G. Zhong and P. Beckers 183–192
η%-Superconvergence of finite element approximations in the interior of general meshes of triangles, I. Babuška, T. Strouboulis and C.S. Upadhyay 273–305
Hybrid-Trefftz finite element method for Reissner plates on an elastic foundation, W.H. Qin 379–392
Interpolation methods for the construction of shape function space of nonconforming finite elements, J. Gao and T.M. Shih 93–103
Nonlinear and chaotic oscillations of composite plates and shells under periodic heat load, J.H. Argyris and L. Tenek 351–377
Some geometrical results and estimates for quadrilateral finite elements, K. Arunakirinathar and B.D. Reddy 307–314
The incremental flow formulation for the numerical analysis of 3-dimensional viscous deformation processes: continuum formulation and computational aspects, J. Bonet and P. Bhargava 51– 68
Unit-impulse response matrix of unbounded medium by infinitesimal finite-element cell method, J.P. Wolf and C. Song 251–272
Variational principles, FE and MPT for analysis of nonlinear impact–contact problems, Q.H. Qin and X.Q. He 205–222

Fluid mechanics
CFD predictions of lobed mixer performance, P. Koutmos and J.J. McGuirk 131–144

Fracture mechanics
A numerical procedure for the determination of certain quantities related to the stress intensity factors in two-dimensional elasticity, P.J. Papadakis and I. Babuška 69– 92

Heat and diffusion
Eulerian–Lagrangian localized adjoint methods for a nonlinear advection–diffusion equation, H.K. Dahle, R.E. Ewing and T.F. Russell 223–250
Nonlinear and chaotic oscillations of composite plates and shells under periodic heat load, J.H. Argyris and L. Tenek 351–377
Use of a spreadsheet program in a two-dimensional heat conduction problem, A. Kharab 173–181

Miscellaneous topics
Genetic search methods for assessing geometric tolerances, L.C.R. Carpinetti and D.G. Chetwynd 193–204
Some geometrical results and estimates for quadrilateral finite elements, K. Arunakirinathar and B.D. Reddy 307–314

Nonlinear mechanics
A mathematical framework for finite strain elastoplastic consolidation. Part 1: Balance laws, variational formulation, and linearization, R.I. Borja and E. Alarcón 145–171
Nonlinear and chaotic oscillations of composite plates and shells under periodic heat load, J.H. Argyris and L. Tenek 351–377
On finite element implementation of geometrically nonlinear Reissner's beam theory: three-dimensional curved beam elements, A. Ibrahimbegović 11– 26

The incremental flow formulation for the numerical analysis of 3-dimensional viscous deformation processes: continuum formulation and computational aspects, J. Bonet and P. Bhargava 51– 68
Variational principles, FE and MPT for analysis of nonlinear impact–contact problems, Q.H. Qin and X.Q. He 205–222

Numerical solution procedures
A computational method for design senstivity analysis of elastoplastic structures, T.H. Lee and J.S. Arora 27– 50
A modified generalized midpoint rule for the integration of rate-dependent thermo-elastic-plastic constitutive equations, P.A. Fotiu 105–129
A numerical procedure for the determination of certain quantities related to the stress intensity factors in two-dimensional elasticity, P.J. Papadakis and I. Babuška 69– 92
Alternative integration methods for problems in structural dynamics, B. Owren and H.H. Simonsen 1– 10
Eulerian–Lagrangian localized adjoint methods for a nonlinear advection–diffusion equation, H.K. Dahle, R.E. Ewing and T.F. Russell 223–250
η%-Superconvergence of finite element approximations in the interior of general meshes of triangles, I. Babuška, T. Strouboulis and C.S. Upadhyay 273–305
Interpolation methods for the construction of shape function space of nonconforming finite elements, J. Gao and T.M. Shih 93–103

Optimization and design of structures
A computational method for design senstivity analysis of elastoplastic structures, T.H. Lee and J.S. Arora 27– 50

Optimizations
Genetic search methods for assessing geometric tolerances, L.C.R. Carpinetti and D.G. Chetwynd 193–204

Plasticity
A computational method for design senstivity analysis of elastoplastic structures, T.H. Lee and J.S. Arora 27– 50
A mathematical framework for finite strain elastoplastic consolidation. Part 1: Balance laws, variational formulation, and linearization, R.I. Borja and E. Alarcón 145–171
A modified generalized midpoint rule for the integration of rate-dependent thermo-elastic-plastic constitutive equations, P.A. Fotiu 105–129
Variational principles, FE and MPT for analysis of nonlinear impact–contact problems, Q.H. Qin and X.Q. He 205–222

Shells and plates
A group theoretic approach to the global bifurcation analysis of an axially compressed cylindrical shell, J.C. Wohlever and T.J. Healey 315–349
Hybrid-Trefftz finite element method for Reissner plates on an elastic foundation, W.H. Qin 379–392
Interpolation methods for the construction of shape function space of nonconforming finite elements, J. Gao and T.M. Shih 93–103
Nonlinear and chaotic oscillations of composite plates and shells under periodic heat load, J.H. Argyris and L. Tenek 351–377

Singularity methods
A numerical procedure for the determination of certain quantities related to the stress intensity factors in two-dimensional elasticity, P.J. Papadakis and I. Babuška 69– 92

Solution of differential equations
A modified generalized midpoint rule for the integration of rate-dependent thermo-elastic-plastic constitutive equations, P.A. Fotiu 105–129

Solutions of ordinary and partial differential eqautions
Alternative integration methods for problems in structural dynamics, B. Owren and H.H. Simonsen 1– 10
Dual analysis with general boundary conditions, J.F. Debongnie, H.G. Zhong and P. Beckers 183–192
Eulerian–Lagrangian localized adjoint methods for a nonlinear advection–diffusion equation, H.K. Dahle, R.E. Ewing and T.F. Russell 223–250
Use of a spreadsheet program in a two-dimensional heat conduction problem, A. Kharab 173–181

Stability in structural mechanics
A group theoretic approach to the global bifurcation analysis of an axially compressed cylindrical shell, J.C. Wohlever and T.J. Healey 315–349

Structural mechanics
A computational method for design senstivity analysis of elastoplastic structures, T.H. Lee and J.S. Arora 27– 50
Dual analysis with general boundary conditions, J.F. Debongnie, H.G. Zhong and P. Beckers 183–192
Hybrid-Trefftz finite element method for Reissner plates on an elastic foundation, W.H. Qin 379–392
Interpolation methods for the construction of shape function space of nonconforming finite elements, J. Gao and T.M. Shih 93–103
Nonlinear and chaotic oscillations of composite plates and shells under periodic heat load, J.H. Argyris and L. Tenek 351–377
On finite element implementation of geometrically nonlinear Reissner's beam theory: three-dimensional curved beam elements, A. Ibrahimbegovi' 11– 26

Subsonic flow
CFD predictions of lobed mixer performance, P. Koutmos and J.J. McGuirk 131–144

Systems of linear and nonlinear simultaneous equations
Genetic search methods for assessing geometric tolerances, L.C.R. Carpinetti and D.G. Chetwynd 193–204

Thermal effects and thermodynamics
A modified generalized midpoint rule for the integration of rate-dependent thermo-elastic-plastic constitutive equations, P.A. Fotiu 105–129

Turbulence
CFD predictions of lobed mixer performance, P. Koutmos and J.J. McGuirk 131–144

Viscoelastic and viscoplastic media
A modified generalized midpoint rule for the integration of rate-dependent thermo-elastic-plastic constitutive equations, P.A. Fotiu 105–129
The incremental flow formulation for the numerical analysis of 3-dimensional viscous deformation processes: continuum formulation and computational aspects, J. Bonet and P. Bhargava 51– 68

Viscous flow
CFD predictions of lobed mixer performance, P. Koutmos and J.J. McGuirk 131–144
The incremental flow formulation for the numerical analysis of 3-dimensional viscous deformation processes: continuum formulation and computational aspects, J. Bonet and P. Bhargava 51– 68
